

The 4th **JIEPP** Japan-India Exchange Seminar

Joint degrees between India and Japan – Current situation and future prospect

Joint degrees are expected to be one of the effective measures of promoting exchanges between universities in Japan and other countries and contribute towards attracting exchange students. However, there are many institutional and financial tasks that need to be overcome for joint degrees to become possible, even though they are thought to become more important in promoting exchanges between Japan and India. In this seminar, professors from Gifu University, which has realized joint degrees with the Indian Institute of Technology Guwahati, will give lectures and there will be an opportunity for the audience to exchange opinions with the speakers.
