Many head-on crashes on this narrow, sloping S-curve path. Pay attention to the road ahead and speed down!

When a staff was checking the air pressure of a rear tire, the bicycle was moved forward causing the staff's left hand to be caught between the tire and the mudguard. Required 5 stitches.

A student fell down when she was cycling near the gates at night and road up onto the end stones which she did not notice. She needed about 4 weeks to recover from the fractured top of the humerus of her right shoulder.

13018N A student was cycling downhill and slipped on the wet road. He hit the right side of his body heavily when he was thrown off his bicycle.

11172F Not noticing the speed bump at night, fell over and smashed the left hand, almost removing a fingernail completely. 17 days before fully recovery.

0926J While cycling downhill in a light rain, skidded and fell over. Required treatment for internal bleeding under the right knee cap and damaged ligament. 2 weeks for recovery.

14155F Fell over when the rear tire drifted on applying the brakes in the rain, requiring stitches on the chin.
Ikenohata 09117
Lost balance while avoiding an oncoming car and crashed into a wall. Transferred to the hospital by ambulance with facial contusion and broken front teeth. 14084F

Gate 14084F
Tripped over a bump caused by a gutter while rushing along a sloping path. Injured the right knee cruciate ligament.

Gate 14084F

A staff was hurrying on a bicycle in the rain. She was not looking ahead carefully and hit a car or a guard rail when turning right. She fell down and cut her face on the bicycle. She went to hospital by herself for treatment.

Gate 14084F

A student tripped on a speed bump while returning home at 3 am having been drinking in the lab. A friend found him on the ground and called an ambulance. He had fractured his skull and required 9 days recuperation.

Gate 14085F
Skidded and fell over on a wet pavement in the rain. Injured the right elbow and knee.

Gate 14085F

A staff fell down when he tried to avoid a car suddenly coming out of a side street when he was cycling. He required surgery at a hospital for the fracture of the distal ends of his right collarbone. He was off work for 5 days.

Gate 14085F

A staff was cycling downhill when she fell in, hit the left side of her head on the road and she was transferred to a hospital by ambulance. She required two stitches to her head.

Gate 14085F

Cyclists are prone to enter a speed race with cars on this road with limited space.

Gate 14085F

Luggage on the rear rack fell out while on the move, thus losing balance and fell over resulting in a broken left arm.

Gate 14085F

A student fell resulting in injury to the left leg, waist, both arms and head. 3 days recuperation.

Gate 14085F

A student inadvertently accelerated while trying to turn on the bike’s lights while cycling downhill. The rear tire was broken and could not reduce speed sufficiently before hitting a road bump and flipped over the handlebar. Taken to hospital by ambulance with location to the left knee and dislocated the right shoulder.

Gate 14085F

A student tripped on a speed bump while returning home at 3 am having been drinking in the lab. A friend found him on the ground and called an ambulance. He had fractured his skull and required 9 days recuperation.

This gentle slope is actually quite dangerous with many cyclists inadvertently picking up speed!

The Main Gate gets crowded with inconsistent pattern in traffic flow. Pedestrians should use the side gate as the Main Gate only has enough room for 2 cars to pass.

Don't speed! There isn't enough time for safety checks because of poor visibility.

Many bicycles tend to speed too much down the slope. Many accidents occur with people not noticing the bumps.

People tend to practice for their club activities around this area. Be careful of flying objects!

Take care and avoid crashing into the many people who use this road.

Beware of children at the nursery school!

A pedestrian fell when trying to avoid a bicycle in a drizzle. 3 months recuperation needed for a broken left wrist.

Lost balance on wet braille blocks from the rain from the previous day. Result - broken left ankle and abrasion to left knee.

A faculty came into contact with a civilian doing warm ups near the barriers that he could not avoid as he turned a corner.

This gentle slope is actually quite dangerous with many cyclists inadvertently picking up speed!

A 10 year old boy going downhill at some speed flipped forward on his bicycle when he hit a speed bump that he did not notice. He broke his right arm and grazed his face requiring 4 weeks to recover.

A student flipped forward on his bicycle having lost balance over a speed bump which he did not notice. He needed 5 - 6 weeks to recover from a broken collar bone and a fractured collar bone.

A pedestrian fell when trying to avoid a bicycle in a drizzle. 3 months recuperation needed for a broken left wrist.

Lost balance on wet braille blocks from the rain from the previous day. Result - broken left ankle and abrasion to left knee.
